EDUCATION

North Carolina Agricultural and Technical State University | B.S. Computer Science

December 2026

Relevant Coursework: Data Structures, Database Design, Programming Languages, Analysis of Algorithms, Operating Systems, Internet Systems, Data Analytics in Python, Computer Architecture

TECHNICAL SKILLS

Languages: Python, Java, C++, C, C#, JavaScript, HTML/CSS

Systems & Tools: Linux, Git/GitHub, LangChain, OpenSSL, Network Diagnostics, Hardware Validation/Debugging

ORGANIZATIONS

National Society of Black Engineers (NSBE), ColorStack, Techtalk Toastmasters, Rotary Club

EXPERIENCE

Cisco Systems | Software Engineer Security & Automation Intern, Platform Software Team

May 2026 - Present

Morrisville, NC

- Developing table-driven SerDes and PHY signal-integrity tuning support for Cisco security platforms, mapping switch, PHY-host, and PHY-line parameters by platform, port group, media type, speed family, and lane count.
- Building expected-value verification matrices and local-management validation workflows for WPK/Woodside hardware tuning while preserving WA/TPK backward compatibility across netmod, fixed, management, and FPGA uplink paths.
- Scoping SFP/QSFP field-triage tooling by migrating I2C-based optic reads into slot/port-aware diagnostics that parse EEPROM pages, DOM telemetry, and FCOT metadata into readable analysis.

Cisco Security | Software Engineer Intern, Cryptography IPsec Team

May 2025 - Aug 2025

Morrisville, NC

- Built a Python and LangChain tool that analyzed OpenSSL and post-quantum cryptography libraries to generate automated migration guidance for quantum-resistant security protocol upgrades.
- Reduced cryptographic migration analysis from hours to minutes by automating library inspection and summarizing enterprise IPsec upgrade steps for quantum-safe algorithm adoption.

Bunn Piano Tuning | Owner

July 2021 - Present

North Carolina

- Built and operated a local service business after earning piano tuning certification, managing customer acquisition, scheduling, communication, pricing, and service delivery.
- Served 150+ families, schools, and churches and earned 81 five-star Google ratings through prompt, professional service and consistent customer follow-up.

PROJECTS

[YourAnimeGist.net](#) - Developed a static web application using vanilla JavaScript, HTML5, and CSS3 for filtering and discovering anime from MyAnimeList's 29,000+ entry database. Engineered a Python scraper to fetch data from the Jikan REST API and output minified JSON, reducing file size by 21%. Implemented client-side filtering algorithms supporting complex queries, real-time search functionality, and Fetch API stream readers for accurate download progress tracking.

[Smooth Auto Scroll](#) - Built a Manifest V3 browser extension for hands-free reading with adjustable 0.05x-25x speed, draggable controls, keyboard shortcuts, persistent settings, and smooth script injection. Features adjustable auto-scroll speed (0.05x-25x), draggable speed control UI, keyboard shortcuts, and persistent settings. Implemented Manifest V3 with on-demand script injection and a frame-counting algorithm for smooth-scrolling precision. **Technologies:** JavaScript, Chrome Extension APIs, HTML/CSS, Git

PROFESSIONAL DEVELOPMENT

NCAT Hackathon: Cisco Small Business Challenge, 2nd Place Winner

- Achievement: Secured 2nd place in the NCAT Hackathon: Cisco Small Business Challenge.
- Developed a JavaScript-based local business connection application in a collaborative four-person team, applying presentation skills, marketing principles, and problem-solving techniques to create an engaging user experience that bridges customers with small businesses.
